

High Level Assessment

Amplitude Clinical engaged with Nettitude in April 2020 in order to assess the overall security posture of their environment. A retest of this environment was later conducted by Nettitude in May 2020.

Based on Amplitude Clinical's risk profile, primary security concerns and the vulnerabilities identified at the point of the engagement, Nettitude have found the overall security posture to be **strong**.

Nettitude were able to:

- Observe resilience against most common web application attacks including proper input validation, no injection attacks and sufficient authentication.
- Confirm that a vulnerability had been successfully remediated.
